Pithecellobium dulce Benth.

Family : Fabaceae
Parts Used : Bark
Vernacular Names

English : Deccany Babool, Manilla Tamarind

Malayalam : Korukkappulimaram

Hindi : Vilaitiyimli Sanskrit : Kodukkappuli

Gujarathi : Ekadati, Vitayatiambli

Kannada: Simahunase

Tamil : Karkapilli, Kattupilli, Kodukkappuli, Konapuli, Korukapuli

Telungu: Simachinduga, Simachinta

Distribution and habitat: A native of tropical America; it is grown in India.

Botany: A tree 5-18 m high, the ultimate branches often pendulous, armed with short, sharp, stipular spines.

- *Leaves:* Evenly 2-pinnate, 4-8 cm long; pinnae a single pair, each pinna bearing a single pair of oblique, ovate-oblong, obtuse, 1-4 cm long leaflets.
- *Flowers:* White, in dense heads about 1 cm diameter, their peduncles solitary or fascicled in the axils of small bracts, along the slender branchlets. Pods turgid, twisted, often spiral, 10-18 cm long, about 1 cm wide, dehiscent along the lower suture, the valves red when ripe.
- **Seeds:** 6-8, surrounded by an edible, whitish, pulpy arillus.

Uses: The bark is a febrifuge. The decoction is given as an enema.

Propagation: Seeds.
